3D City Modeling

Monash University

July 1, 2009

PROPOSED

My proposed research project involves the 3D modeling of real city geography using the visualization software COVISE

PROGRESS

So far, I have mostly been reading about COVISE, Visualization, and LIDAR. I haven't been able to get much programming under way because COVISE is not yet set up for us here.

To Do

In the next week, I hope to have everything set up so I can get to work. I have already gotten access to the necessary data files so the next step after the software is installed is to figure out what format I need to convert the data to so that it will show up in COVISE.

Cultural Experiences: Food!

Enjoying fresh hot Fish 'n Chips

Vegemite is a spread made of yeast extract that is commonly eaten over buttered toast.

A very popular Australian treat, I managed to stomach one of these for “brekkie,” our breakfast meal, and found it tastes something like peanut butter made out of salty fish.
