Rendezvous App
by Katerina Zorko
University of Queensland
Week Two June 9, 2014
Plan of Action

- As I begin to work on the code for the app, I realize how long it is taking. There are small details that need to be attended to in the UI.

- My overall goal is to ensure that basic functionality works so that I can incorporate the back end into the app and then after, I can pay closer attention to detail and perfect all aspects of the app.
Things to look for in Demo Video

- Notice how when a friend who has already been invited to the event is selected again, they do not show up again in the invited friends UITextView.

- If the user starts to type a description, then deletes their text, the “Enter a description…” text shows up again in the UITextView.

- The user can dismiss the keyboard by clicking anywhere outside of the UITextView.
My progress so far - iOS simulator video
Future Goals

- I need to enable scrolling on my New Event Screen as well as for specific UITextViews.
- I want to use Google API to allow the user to select a meeting location that will be recognized with google maps.
- Finally if I am able to finish the New Event screen, I want to begin working on the settings screen.
Exploring Australia

At a Russian restaurant in South Bank Parklands in Brisbane, overlooking the river

View of Brisbane from the restaurant
Exploring Australia

We got Scuba certified at Stradbroke Island!

Some pictures I’m stealing from my friend, David Cini, capturing some of the wildlife we saw (including Wobbegong sharks).
Exploring Australia

Regulators, BCDs (buoyancy control device), and some of the other gear we learned to use this weekend.

The boat we took for our 5 ocean dives.
